PROFESSIONAL SUMMARY

DevOps Engineer serving as the sole deployment and infrastructure engineer for a software company's flagship product — a government-focused eHRMS platform (attendance, leave, and payroll) — live across 15+ client environments, alongside 250+ client websites. Built deployment automation that cut server setup from hours to minutes, introduced CI/CD where none existed, and independently diagnosed and resolved a recurring production database failure. AWS Certified Cloud Practitioner, currently pursuing AWS Solutions Architect Associate.

CORE TECHNICAL SKILLS

AWS Services: EC2, S3, RDS, Lambda, VPC, IAM, CloudWatch, CloudTrail, DynamoDB, ECS, Identity Center

CI/CD Tools: GitLab CI/CD, AWS CodePipeline, CodeBuild, CodeDeploy, GitHub Actions, Jenkins

Infrastructure as Code: Terraform, AWS CloudFormation

Web & Hosting: Nginx, Apache, Webmin/Virtualmin, Hostinger & Bigrock cPanel deployments

Security & Networking: IAM Roles & Policies, VPC, SSH/SSL, DNS, Cloudflare (DNS, Security, VPN), TCP/IP

Monitoring & Alerting: AWS CloudWatch, CloudTrail, custom Teams/email webhook alerting

Databases: MySQL (administration, migration, backup automation), DynamoDB

Scripting & Languages: Python, Shell/Bash, SQL

PROFESSIONAL EXPERIENCE

DevOps Engineer — *Gordinateur Pvt. Ltd.*

07/2025 – Present

- Serve as the sole deployment engineer for the company's flagship product, a government-focused eHRMS platform (attendance, leave, and payroll) live across 15+ client environments, alongside 250+ client websites.
- Built a Bash automation script that reduced full application deployment — domain mapping, Nginx/Apache virtual host configuration, directory setup, Git and database configuration — from 2–3 hours to approximately 30 minutes.
- Introduced GitLab CI/CD for the development environment where none previously existed, letting developers push code directly to automatic deployment and work on the same project without manual deployment conflicts.
- Diagnosed a recurring MySQL crash that repeatedly took the development server offline by isolating a corrupted database table invisible at the application layer; backed up and migrated the data to a new table, permanently resolving the issue.
- Built a production alerting system using Microsoft Teams and email webhooks, closing a gap where no server alerting had previously existed.
- Manage 15 Ubuntu servers and 200+ client domains — handling DNS, Cloudflare (DNS, security, VPN), and cPanel deployments across Hostinger and Bigrock — and run automated database backups from production servers to local storage and AWS S3 for offsite redundancy.

AWS Re/Start Program Intern — *Magic Bus India Foundation*

09/2024 – 12/2024

- Designed and deployed a scalable AWS cloud architecture (EC2, S3, RDS) with Auto Scaling groups and Elastic Load Balancers for a simulated production workload.
- Built CI/CD automation using AWS CodePipeline/CodeBuild and serverless workflows with Lambda/DynamoDB; configured VPC networking, security groups, and IAM policies per AWS security best practices.

IT Support Executive — *One Point One Solutions Ltd*

11/2022 – 02/2024

- Resolved approximately 60 hardware, networking, and software tickets weekly (Level-1/Level-2) and provided direct, non-ticketed support to senior leadership across departments; ran server backups, antivirus monitoring, and device health checks.

KEY PROJECTS

Smart Timetable & Attendance Management System

Python, Flask, MySQL, OpenCV (Face Recognition), Mobile App

- Built a full-stack timetable management system with a mobile app for student attendance via face recognition, featuring offline-first sync APIs, UUID-based deduplication, role-based access control (RBAC), and audit logging.

Personal Website CI/CD & Infrastructure Automation

AWS CodePipeline, CodeDeploy, CodeCommit, CloudFormation, GitHub Actions, IAM, EC2, S3

- Automated deployment and infrastructure provisioning for personal websites using AWS CI/CD services and CloudFormation triggered by GitHub Actions, enforcing least-privilege IAM roles with version-controlled, reproducible environments.

SPEAKING & TRAINING

- Delivered a 2-hour workshop on Cloud Computing & DevOps to 30+ students; received a formal letter of appreciation as guest speaker.
- Conducted a 2-month Cybersecurity crash course for 20+ students.

EDUCATION

M.Sc. Data Analytics — *Pillai College of Arts, Commerce & Science*

06/2024 – 04/2026 (Expected)

B.Sc. Computer Science — *Pillai College of Arts, Commerce & Science*

2020 – 2023

CERTIFICATIONS

AWS Certified Cloud Practitioner • AWS Solutions Architect Associate — In Progress • AWS Re/Start Graduate • SQL for Data Analytics – Udemy
